ARCTIC ANIMALS

This week we have been learning all about information books and how they are different from story books. Miss Stansfield set the children the challenge of writing their own information books about arctic animals. So we found out lots of interesting facts and wrote amazing books.

INTERESTING INUITS

After learning about igloos, this week we've been finding out about the people who live in them, how they keep warm and how they get their food. The children were fascinated to discover that inuit people cut holes in the ice to catch fish. They were even more fascinated when Mrs Clarkson went fishing and brought in the fish that she caught!

It was very interesting for us to watch how the children reacted to this new experience, with some embracing it and others not quite so sure. Afterwards we chatted about how important it is for our well-being to try new things.

MARVELLOUS MAGNETS

Some of the children wanted to go ice fishing themselves, however given our limited budget we decided to recreate the experience in the classroom. One thing led to another and we ended up having an afternoon of exploring magnets...

ICE AGE

Oh no, a polar bear and a woolly mammoth are frozen in the ice! How are we going to rescue them? With lots of determination, warm water, salt and metal spoons!

Have a good week end.
